

About eZono

ezono thinks differently.

The eZono 4000 has been developed after listening to clinicians worldwide. The result is an advanced imaging system, with powerful, revolutionary needle guidance and advanced on-board education modules.

These features, together with MiniSim, our anatomically relevant phantoms, provide our customers with the guidance and educational tools they need, for accurate needle guidance at the point of care.

eZono is dedicated to provide simple solutions to complex problems.

For more information on our imaging or education solutions please contact us or visit our website www.eZono.com
